

## Seminar

### Prof. Dr. Carsten Bergmann

Medical and Managing Director Global,  
Medizinische Genetik Mainz and Limbach Genetics  
and  
Department of Medicine/Nephrology,  
University of Freiburg

### Why is it important to know your patient's genotype ?

Our group is interested in the characterization of newly identified disease genes and the translation of genetic findings into mechanistic studies. Our overarching aim is to better understand underlying disease processes to finally define therapeutic targets and design potential clinical treatment approaches.

We are a team of complementary expertise and use multidisciplinary approaches with a broad spectrum of techniques. Close interrelationships to patient data and clinical genetics with outstanding sequencing and bioinformatics facilities ([www.medgen-mainz.de](http://www.medgen-mainz.de)) are key for our research.

For many years we have been at the forefront of genetic diagnostics and were one of the first laboratories that utilized massively parallel sequencing on a larger scale. Complementary strengths of the private sector and academia are a major asset of our group.

**Time:** Monday, February 26, 2024, 16:30h  
**Location:** Seminarraum Physiologie  
VKL 4.1.29  
Universität Regensburg  
and Zoom

**To get the Zoom link please contact:**
