

Infineon - Identity Management Systems

The chair of Information Systems accompanies the Infineon AG in a cooperation in order to assist the implementation of a world-wide corporate Identity Management System. Starting from the actual state within the company a strategy for a global administration concept with the focus on Provisioning techniques on a modular basis is being developed. The related research fields are Identity Management, (role-based) Access Control and Access Management as well as Resource Provisioning and Auditing.

Project Partner: [Infineon Technologies AG](#)
